

Embedded Engineer – Auto Plant Maintenance

Location: Ladson, South Carolina
Technology: Siemens S7
Purchaser: ThyssenKrupp Presta SteerTec
Purchase Value: > \$500,000

REFERENCE

Project Description

Presta Steering develops and manufactures steering shafts, steering columns and steering gears which in millions of vehicles around the globe make sure that motorists arrive safely at their destination. The steering columns, manually adjustable in height and length, are remarkable for their outstanding safety concepts while offering an appreciable level of driver comfort. Presta Steering is an acknowledged expert in electromechanical steering booster systems. Its own developments such as EPAS, TubPas® and ParPas® have made the company a preferred supplier to the leading auto OEMs.

INP Services

- Installation and commissioning support for OEM supplied machinery
